  2. Click "**Enroll**".
  3. On the registration form, enter your information and then click "**Submit**".
- 

Dr. Jonathan Trent will be presenting:

### New Developments in GIST for Patients and their Families

This presentation will answer some basic questions that many GIST patients and their families have about GIST. He will talk about Gleevec for metastatic GIST as well as for preventative treatment after surgery. This will include answering questions about dose, side effects, measuring response, genotyping, likelihood of response to Gleevec and duration of treatment.

Dr. Trent will also discuss options for managing Gleevec resistance. These options vary according to the type of resistance, local or widespread, and include other drugs, surgery, hepatic artery embolization, and clinical trials.

Jonathan Trent, MD, PhD  
MD Anderson Cancer Center  
University of Texas
